Blame

```
1      c programming has three main
      categories of data types.they are
      primary data type, derived data
      type and user-defined data type
2      1) primary data type:int,char,
      float, double and void.
3      2) Derived data type:arrays,
      pointers
4      3)user-defined data type:struct,
      union,enum
```

Blame

```
1      c is used to develop core
      components of operating systems
      such as windows and Linux
2      c is applied in embedded systems
      in small devices such as washing
      machines, microwave ovens and
      printer
3      c is used to create game engines
4      c is applied to develop data base
      engines.MYSQL data base is
      implemented using c
5      c is employed to create desktop
      applications
6      c is used to create programs for
      devices and sensors of IOT
```
